## Topic Check In - 10.01b and 10.01c Units and measurement

1. A three figure bearing of $090^{\circ}$ is the same as which direction on a compass?
2. A compass bearing of SW is the same as which three-figure bearing?

3. A map is drawn to a scale of $1: 5000$ which means:

1 cm on the map represents $\qquad$ cm or $\qquad$ m.
4. A road on a map is 5 cm long and represents an actual distance of 200 m . What scale is used for the map?
5. Carl travels from point $A$ to point $B$, as shown on the scale diagram below.

Complete this statement.
Carl travels on a bearing of $\qquad$ for $\qquad$ m.
6. The diagram on the right shows a journey from $P$ to $Q$. Show that the bearing of $P$ from $Q$ is $253^{\circ}$.

7. A boat navigates around a coastline.

Choose a suitable scale and draw the path the boat takes.
Show that the boat has travelled approximately 400 m North in total.

|  | Bearing | Distance |
| :---: | :---: | :---: |
| From W to X | $060^{\circ}$ | 500 m |
| From X to Y | $090^{\circ}$ | 300 m |
| From Y to Z | $075^{\circ}$ | 600 m |

8. Lifeboat station $X$ is due West from lifeboat station $Y, 8 \mathrm{~km}$ apart on the coast. They both receive an SOS from a boat in difficulty out at sea.
Station X receives the signal on a bearing of $040^{\circ}$ and station Y on a bearing of $290^{\circ}$. Explain which station should send a lifeboat out for the rescue operation.
9. A light aircraft flies on a bearing of $080^{\circ}$ for 400 km from Town A to Town B. It then flies to Town C on a bearing of $130^{\circ}$ for 100 km . Find the distance and bearing of the direct route from Town C back to Town A .
10. A submarine, anchored at sea, detects a moving object with its sonar. The table below shows two sonar readings taken at a 10 second interval.

| Time | Bearing from <br> submarine | Distance from the <br> submarine |
| :---: | :---: | :---: |
| 0 seconds | $150^{\circ}$ | 50 m |
| 10 seconds | $070^{\circ}$ | 100 m |

Using a scale of 1 cm to represent 10 m , draw a scale diagram to show this information and calculate the speed of the object.

## Extension

a) A robot is programmed to move around a square lawn of side 8 m .

Write the instructions giving the angles it turns as bearings.

b) The robot is then programmed to move in the shape of a regular hexagon of side 6 m . Write the instructions giving the angles it turns as bearings.

## Answers

1. East
2. $225^{\circ}$
3. 5000 cm or 50 m
4. $1: 4000$
5. Angle $=035^{\circ}$

Length $=$ measured length dependent upon reprographic effects $\times 2$ for distance in $m$ (measured length dependent upon reprographic effects $\times 200=$ distance in cm)
6. Bearing is $73^{\circ}+180^{\circ}=253^{\circ}$ oe
7. Possible scale $1: 10000$ or 1 cm represents 100 m

Distance North $=400 \mathrm{~m}( \pm 20 \mathrm{~m})$

8. Students to recognise that bearing of $290^{\circ}$ will mean a $20^{\circ}$ angle inside triangle.

Scale diagram gives $X B=2.9 \mathrm{~km}$ and $Y B=6.5 \mathrm{~km}$.
Alternatively, students may sketch diagram and use knowledge of relationship between angles and lengths of triangles (smallest interior angle opposite shortest side length).
9. Distance $470 \mathrm{~km}( \pm 20 \mathrm{~km})$, bearing $270^{\circ}\left( \pm 2^{\circ}\right)$

10. Distance travelled in 10 seconds $=104 \mathrm{~m}( \pm 2 \mathrm{~m})$

Speed $=10.4 \mathrm{~m} / \mathrm{s}( \pm 0.2 \mathrm{~m} / \mathrm{s})$

## Extension

a) Square

| Bearing | Distance |
| :---: | :---: |
| $090^{\circ}$ | 8 m |
| $180^{\circ}$ | 8 m |
| $270^{\circ}$ | 8 m |
| $360^{\circ}$ | 8 m |

## b) Hexagon

| Bearing | Distance |
| :---: | :---: |
| $090^{\circ}$ | 6 m |
| $150^{\circ}$ | 6 m |
| $210^{\circ}$ | 6 m |
| $270^{\circ}$ | 6 m |
| $330^{\circ}$ | 6 m |
| $390^{\circ}$ | 6 m |
